Reinforced Concrete

ANALYSIS AND DESIGN

b

Blackwell
Science

This book covers the analysis and design of reinforced concrete elements in foundations and superstructures in a logical, step-by-step fashion. The theory of reinforced concrete and the derivation of the code formulae have been clearly explained.

The text is backed up by numerous illustrations, design charts and tables referring frequently to the relevant codes of practice. A large number of worked examples cover almost all types of reinforced concrete elements.

The step-by-step approach will ensure that:

- all design requirements are logically adhered to
- a standardised approach is established in a design office
- a simplified procedure for checking and for quality assurance can be implemented.

Contents

<i>Preface</i>	xiii
<i>References</i>	xv
Chapter 1 Theory of Reinforced Concrete	1
1.0 Notation	1
1.1 Introduction	2
1.2 Characteristic strength of materials	3
1.3 Material factors	3
1.4 Material stress–strain relationship	4
1.5 Design formulae for reinforced concrete sections	6
1.5.1 Singly reinforced rectangular section	6
1.5.2 The concept of balanced design and redistribution of moments	7
1.5.3 Doubly reinforced rectangular section	8
1.5.4 Singly reinforced flanged beams	9
1.6 Ultimate limit state – shear	11
1.7 Serviceability limit state – crack width	17
1.8 Serviceability limit state – deflection	18
1.9 Ultimate limit state – torsion	18
1.10 Ultimate limit state – columns	19
1.11 Ultimate limit state – corbels	31
1.12 Wood–Armer combination of moment triads	32
1.13 Serviceability limit state – bending and direct loads	34
Chapter 2 Design of Reinforced Concrete Beams	41
2.0 Notation	41
2.1 Analysis of beams	43
2.2 Load combinations	47
2.3 Step-by-step design procedure for beams	50
2.4 Worked examples	65
Example 2.1: Simply supported rectangular beam	65
Example 2.2: Three span continuous beam	73
Example 2.3: Design of beam with torsion	85
2.5 Figures for Chapter 2	99
Figure 2.1: Values of β_f	99
Figure 2.2: Simplified detailing rules for beams	100

Chapter 3	Design of Reinforced Concrete Slabs	101
3.0	Notation	101
3.1	Analysis of slabs	103
3.2	Load combinations	107
3.3	Step-by-step design procedure for slabs	107
3.4	Worked example	120
	Example 3.1: Design of a two-way slab panel	120
3.5	Figures and Tables for Chapter 3	130
	Figures 3.1 and 3.2: Elastic and elasto-plastic unit resistances for one-way elements, and support shears	130–1
	Figures 3.3. to 3.17: Moment and deflection coefficients for two-way elements	132–6
	Figures 3.18 to 3.33: Location of yield-lines for two-way elements	137–44
	Figure 3.34: Simplified detailing rules for slabs	145
	Table 3.1: Graphical summary of two-way elements	146
	Table 3.2: Ultimate unit resistance for two-way elements (symmetrical yield-lines)	147
	Table 3.3: Ultimate unit resistance for two-way elements (unsymmetrical yield-lines)	148
	Table 3.4: Ultimate support shears for two-way elements (symmetrical yield-lines)	149
	Table 3.5: Ultimate support shears for two-way elements (unsymmetrical yield-lines)	150
Chapter 4	Design of Reinforced Concrete Columns	151
4.0	Notation	151
4.1	Analysis of columns	152
4.2	Load combinations	154
4.3	Step-by-step design procedure for columns	155
	4.3.1 Rectangular columns	155
	4.3.2 Circular columns	161
	4.3.3 Rectangular and circular columns	164
4.4	Worked examples	164
	Example 4.1: Design of a biaxially loaded slender column	164
	Example 4.2: Design of a column with predominant moment about the major axis	169
	Example 4.3: Design of a member with uniaxial moment and tension	176
	Example 4.4: Design of a member with biaxial moment and tension	183
Chapter 5	Design of Corbels and Nibs	193
5.0	Notation	193
5.1	Load combinations	193
5.2	Step-by-step design procedure for corbels	194
5.3	Step-by-step design procedure for nibs	197
5.4	Worked examples	200

	Example 5.1: Design of a corbel	200
	Example 5.2: Design of a concrete nib	208
5.5	Figures and Tables for Chapter 5	212
	Figure 5.1: Chart for determining z/d	212
	Table 5.1: Allowance for effects of spalling at supports	213
	Table 5.2: Allowance for effects of spalling at supported members	213
	Table 5.3: Allowance for construction inaccuracies	213
Chapter 6	Design of Pad Foundations	215
6.0	Notation	215
6.1	Analysis for bearing pressure on soil	218
	6.1.1 Isolated single column pad	218
	6.1.2 Single column pads connected by ground beams	219
	6.1.3 Isolated multiple column pad	222
	6.1.4 Multiple column pads connected by ground beams	223
6.2	Analysis for ultimate load	223
	6.2.1 Isolated single column pad	223
	6.2.2 Single column pads connected by ground beams	224
	6.2.3 Multiple column pads	224
6.3	Load combinations	225
6.4	Sign convention	226
6.5	Essentials of soil mechanics	226
	6.5.1 Ultimate bearing capacity	226
	6.5.2 Settlement of foundation	229
	6.5.3 Sliding resistance	231
6.6	Bearing pressure calculations	232
	6.6.1 Rectangular Pad – uniaxial bending – no loss of contact	232
	6.6.2 Rectangular Pad – uniaxial bending – loss of contact	234
	6.6.3 Rectangular Pad – biaxial bending – no loss of contact	234
	6.6.4 Rectangular Pad – biaxial bending – loss of contact	235
	6.6.5 Multiple column – biaxial bending – no loss of contact	238
	6.6.6 Circular pad – biaxial bending – no loss of contact	238
6.7	Step-by-step design procedure for pads	239
6.8	Worked examples	250
	Example 6.1: RC pad with single column	250
	Example 6.2: RC pad with multiple columns	264
	Example 6.3: Mass concrete pad – side bearing in cohesive soils	277
	Example 6.4: Mass concrete pad – side bearing in cohesionless soils	283
6.9	Figures for Chapter 6	289
	Figure 6.1: Values of N_c , N_q and N_γ	289
	Figure 6.2: Calculation of mean vertical stresses in soil	290
	Figure 6.3: Plan on base showing different zones	291
	Figure 6.4: Pressures under rectangular base – biaxial bending	292

Chapter 7 Design of Piled Foundations	293
7.0 Notation	293
7.1 Vertical load – single pile capacity	296
7.2 Horizontal load – single pile capacity	299
7.3 Pile group effects	301
7.4 Analysis of pile loads and pile caps	302
7.4.1 Rigid pile cap	302
7.4.2 Flexible pile cap	306
7.5 Load combinations	309
7.6 Step-by-step design procedure for piled foundations	310
7.7 Worked example	326
Example 7.1: Pile cap for an internal column of a building	326
7.8 Figures for Chapter 7	354
Figure 7.1: Determination of pile efficiency	354
Figure 7.2: Bearing capacity factors for deep foundations	354
Chapter 8 Design of Walls	355
8.0 Notation	355
8.1 Analysis of walls	357
8.1.1 Walls and properties of walls	357
8.1.2 Modelling for structural analysis	368
8.2 Step-by-step design procedure for walls	370
8.3 Worked example	385
Example 8.1: Reinforced concrete cell	385
Chapter 9 Design of Flat Slabs	403
9.0 Notation	403
9.1 Definitions	403
9.2 Analysis of flat slabs	404
9.3 Design of flat slabs	406
9.4 Step-by-step design procedure for flat slabs	412
9.5 Worked example	413
Example 9.1: Flat slab construction for a sports hall	413
9.6 Tables and Graphs for Chapter 9	435
Tables 9.1 to 9.6: Bending moment coefficients for design of flat slabs	438–43
Table 9.7: Bending moment coefficient for design of columns in flat slab construction	444
Graphs 9.1 to 9.18: Correction factors for bending moments in flat slabs	445–53
Graphs 9.19 to 9.26: Correction factors for bending moments in columns	454–7
Chapter 10 Design of Connections	459
10.0 Notation	459
10.1 Introduction	459
10.2 Contents: type of connections	460
10.3 Anchorage and bond	460

10.3.1	Basic rules of anchorage and laps	461
10.3.2	Design of tension laps	463
10.3.3	Design of compression laps	464
10.3.4	Curtailement and anchorage of bars	465
10.4	Building ties	467
10.4.1	Peripheral ties	467
10.4.2	Internal ties	468
10.4.3	Horizontal column and wall ties	469
10.4.4	Vertical ties	470
10.5	Connections	470
Chapter 11	General Figures, Tables and Charts	487
Figure 11.1:	Coefficient of moment of inertia of cracked sections	488
Figure 11.2:	Values of v_c for $f_{cu} = 25 \text{ N/mm}^2$	489
Figure 11.3:	Values of v_c for $f_{cu} = 30 \text{ N/mm}^2$	490
Figure 11.4:	Values of v_c for $f_{cu} = 35 \text{ N/mm}^2$	491
Figure 11.5:	Values of v_c for $f_{cu} = 40 \text{ N/mm}^2$ and above	492
Table 11.1:	Area of steel reinforcement for various spacings	493
Table 11.2:	Sectional properties	494
Table 11.3:	Basic span/effective depth ratios for rectangular and flanged beams	495
Chart 11.4:	Modification factor for compression reinforcement	496
Chart 11.5:	Modification factor for tension reinforcement	496
Table 11.6:	Nominal cover to all reinforcement including links to meet durability requirements	497
Table 11.7:	Nominal cover to all reinforcement including links to meet specified periods of fire resistance	497
Tables 11.8 to 11.17:	Design tables for rectangular columns	498–517
Tables 11.18 to 11.27:	Design tables for circular columns	518–37
Index		538

Preface

I believe that the contents of this book will prove to be extremely valuable to practising engineers, students and teachers in the field of reinforced concrete design. There are many excellent books available dealing with the design of reinforced concrete elements but, in my opinion, they lack completeness in certain ways. The design of a reinforced concrete member requires many checks in a systematic structured manner and the step-by-step approach adopted in this book is intended to ensure that the design process is complete in all respects. It is my view that the member itself, when fully designed, does not constitute a complete design because it ignores the connections to other members and to the foundation that are needed to provide true completeness of design for the structure. I have attempted here to elucidate the necessary global analysis. Also, most books on reinforced concrete design do not deal with the aspects of soil structure interaction problems and are hence incomplete.

The highly structured step-by-step methodology I have used makes the book fully comprehensive and user-friendly. Accordingly, the task of quality assurance becomes less arduous and the product or output of a design office becomes fully standardised if this approach is strictly followed. For students, the book should prove to be invaluable because the essential elements of the theory of reinforced concrete are discussed, followed by a structured approach to the design of all elements in a building, including foundations and the connections of the reinforced concrete members to each other to create a complete building. The numerous worked examples should be very useful to students and practitioners alike. The book also presents practical advice on designing reinforced concrete elements and the student should benefit from learning the methods adopted in a design consultancy.

My intention has been to illustrate the design principles at each stage by using a profusion of sketches. The book includes many more illustrations than a standard textbook on reinforced concrete because it was felt necessary to clear all ambiguities in the codes of practice by the use of diagrams, an approach which should appeal to both practising engineers and students.

The book includes a lot more new design aids than are usually found in the available books. For instance, the tables and charts included in this book for the design of solid slabs and flat slabs cannot be found in other published textbooks on the subject. References to many published books on the subject of reinforced concrete are also given.

I would like to thank the British Standards Institution for their kind

permission to reproduce some of the essential tables from the codes of practice. I also wish to thank the US Army Armament Research and Development Centre, Picatinny Arsenal, NJ and Amman and Whitney, Consulting Engineers, New York for granting permission to reproduce the extremely useful charts on the yield-line design of slabs in Chapter 3.

Finally this undertaking could not have been successfully achieved without the active encouragement of my wife.

S.S. Ray
Great Bookham
Surrey

The opinions expressed in this book are those of the author and the correctness or otherwise of the text is the author's responsibility. Taylor Woodrow and its Group of Companies are in no way associated with the production of this book and they have not adopted the book or any part of it as their in-house standard.
